## SUMMARY

Fullstack developer with a background in analytical science and specialized professional training in Cybersecurity. I transitioned into software engineering to combine my problem-solving skills with a deep interest in application security. I build responsive, secure web applications using the MERN stack and am eager to contribute to an engineering team that values clean code and robust security.

## SKILLS

**Frontend:** React, Redux Toolkit, JavaScript (ES6+), HTML5, CSS3, Bootstrap.

**Backend:** Node.js, Express.js, JWT Authentication, RESTful APIs, PHP, MongoDB, SQL

**Database & Tools:** MongoDB (Atlas), Git/GitHub, Vercel, Netlify, Postman, Thunder Client, Firebase

**Security:** Application Security, Network Security, Ethical Hacking, Secure Auth (Bcrypt, JWT), Encryption & Hashing, protection against XSS/SQL Injection

## KEY PROJECTS

HireAI | AI-Powered Applicant Tracking System [<https://github.com/glowzaq/hireai>]

- Developed a MERN-stack ATS that uses Natural Language Processing (NLP) to parse resumes and rank candidates.
- Built a recruiter dashboard to manage job postings and candidate pipelines in real-time.
- Implemented secure authentication with JWT, integrated MongoDB for user data and job records, and added AI-driven recommendations using Node.js logic. Handled real-time updates via Express routes.

GlowBank | Secure Banking Application [<https://github.com/glowzaq/glowbank>]

- Engineered a modern banking web app featuring real-time fund transfers and transaction history.

- Implemented strict input validation and JWT-based session management to prevent common vulnerabilities like XSS and Session Hijacking.
- Designed a clean, responsive UI to ensure a seamless user experience across mobile and desktop.

Recipe Finder App [<https://level-2-project.vercel.app>]

- Integrated TheMealDB API into a JavaScript app where users search recipes, view details (ingredients, steps, images), and bookmark favorites.
- Used Firebase for authentication, real-time database storage, and profile display.
- Ensured responsive layout for cross-device use.

GlowCart | MERN E-commerce Platform [<https://github.com/glowzaq/glowcart>]

- Built a full-featured e-commerce site with centralized state management using Redux Toolkit.
- Integrated JWT and Bcrypt for secure user sessions and encrypted password storage.
- Managed data persistence using MongoDB Atlas, handling complex product schemas and user orders.

## EXPERIENCE

Fullstack Developer (Project-Based / Freelance)

JANUARY 2025 - TILL DATE

- Building and deploying web applications for diverse use cases including e-commerce and fintech.
- Focusing on the transition from prototype to secure, hosted applications using Vercel and MongoDB Atlas.
- Collaborating on open-source projects and maintaining a consistent contribution graph on GitHub.

## EDUCATION & CERTIFICATIONS

**Professional Diploma: Cybersecurity (Application & Network Security) SQI**  
*College of Tech & AI, 2025*

**Professional Diploma: Web Development SQI** *College of Tech & AI, 2025*

**Bachelor of Science (B.Sc.): Crop Science** *Landmark University, 2017*

- Developed strong analytical, research, and data-reporting skills in a rigorous scientific environment.
